# Foreign Agricultural Trade of the United States

## FATUS

May/June 1991

## Sales Information

*Foreign Agricultural Trade of the United States* is available on a subscription basis. Subscription includes six bimonthly issues and two annual supplements. Subscription rates are \$25 domestic; \$31.25 foreign. Send check or money order payable to "ERS-NASS" to:

ERS-NASS  
P.O. Box 1608  
Rockville, MD 20850-1608

For faster service or more information, call **1-800-999-6779**.

**Time to Renew?** See renewal information on the back cover.

Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Shirley E. Brown and Traci C. Curry provide word processing and table formatting support. Editorial support is furnished by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, International Economic Systems Branch, Data Services Center.

## **Digest**

**World Trade and U.S. Exports Fall** (see p. 2). U.S. agricultural exports fell 7 percent to \$23 billion during the first 7 months of FY 1991. Exports declined \$2 billion and 17 million tons as prices weakened and the U.S. share of world trade declined. Reduced grain exports accounted for much of the drop, following record world wheat production, record grain production in China, and near-record output in the Soviet Union.

**U.S. Food Imports Total \$19.4 Billion in 1989** (see p. 5). The United States imported \$22.5 billion of agricultural commodities in 1989, including \$19.4 billion of food items. The remaining commodities consisted of nonfood items, such as cotton, tobacco, wool, natural rubber, silk, and crude drugs. Another \$5.2 billion was spent on fish, bringing total spending on imported food to \$24.6 billion.

**Export Share of Production Steady in 1990** (see p. 10). During FY 1990, 17 percent of all U.S. farm production was exported, about the same as during 1988 and 1989. The share remained below FY 1981's record 22 percent. Much of the variation in this share came from changes in bulk product exports, such as grains, oilseeds, and cotton, while high-value exports climbed steadily during the 1980's. About 40 percent of all U.S.-produced bulk products were exported in FY 1990, while the comparable figure for U.S.-produced high-value products was about 9 percent, a new high.

**California Still Top Agricultural Exporting State in FY 1990** (see p. 14). California remained the top exporting State for agricultural products for the sixth year in a row. Also ranked in the top 10 were: Iowa, Illinois, Nebraska, Texas, Kansas, Minnesota, Indiana, Missouri, and Ohio. These are the same 10 States as in FY 1989, although the order changed slightly. These States accounted for 59 percent of all agricultural exports.

## World Trade and U.S. Exports Fall

U.S. agricultural exports fell 7 percent to \$23 billion during the first 7 months of FY 1991. Exports declined \$2 billion and 17 million tons as prices weakened and the U.S. share of world trade declined. Reduced grain exports accounted for much of the drop, following record world wheat production, record grain production in China, and near-record output in the Soviet Union.

With lower prices and reduced volume for corn and wheat, the value of U.S. grain and feed exports declined \$2.5 billion. U.S. oilseed and product exports also fell as the United States lost share in a shrinking market in FY 1991. Exports of high-value products continued rising.

U.S. wheat exports, valued at \$1.6 billion, were down \$1 billion from FY 1990. Wheat volume fell only 3 percent, so lower prices accounted for most of the loss in value. Coarse grain exports fell in both volume and value during the first 7 months. Volume declined 12 million tons to 32 million tons, and value fell \$1.4 billion to \$3.5 billion. Coarse grain prices were just about

unchanged from a year earlier, and virtually all the decline reflected falling volume.

The decline in coarse grain volume and the drop in wheat prices mirrored the same factors. Record world wheat production drove world wheat prices substantially lower during the first half of FY 1991. With wheat prices lower, foreign customers switched purchases from corn, predominantly supplied by the United States, to feed wheat, which is primarily supplied by U.S. competitors.

U.S. coarse grain exports were also reduced by a near-record grain crop in the Soviet Union, the largest customer for U.S. grain in 1991. More Argentine sorghum became available for export to Japan because of a sharply higher 1990/91 Argentine sorghum crop, and China's record grain crop meant increased exports from another competitor to East Asian markets. However, a drought-reduced corn crop in South Africa has cut South Africa's exports to Taiwan and Japan, offsetting some of the loss of market share. (Stephen MacDonald, Commodity and Trade Analysis Branch, 202-219-0822)

## **U.S. Food Imports Total \$19.4 Billion in 1989**

The United States imported \$22.5 billion of agricultural commodities in 1989, including \$19.4 billion of food items. The remaining commodities consisted of nonfood items, such as cotton, tobacco, wool, natural rubber, silk, and crude drugs. Another \$5.2 billion was spent on fish, bringing total value of imported food to \$24.6 billion.

The share of domestic consumption that is imported varies by commodity. The United States imports almost 100 percent of all the "noncompetitive" agricultural commodities for domestic consumption. These include bananas, coffee, tea, cocoa, and tropical oils. However, the United States imports only minimal quantities of products it can produce in abundance domestically, such as dairy products, eggs, certain fruits and vegetables, and red meat.

### **Methodology**

Import shares are calculated from supply and utilization balance sheets. An import share is the total quantity of the commodity imported divided by the quantity available for domestic human food consumption. Ending stocks and any export of the imported commodity are excluded so the ratios may slightly overstate the importance of imports on the domestic market. Also, a portion of the imports may be diverted to nonfood use, such as using grains for feed, seed, alcohol, and fuel production and industrial uses.

Imports of many processed and packaged foods are not accounted for in table 5. Sweetener data, for example, do not include sweeteners contained in imports of confectionery products, bakery goods, frozen or canned fruits and vegetables, jams, jellies, preserves, sauces, and soft drinks. Likewise, beef, vegetable, and pasta data are not included in frozen food information.

### **Increasing Imports of Certain Foods**

Throughout the 1980's, the import share of certain foods has risen steadily. For example, the import share of fish and shellfish domestically consumed rose from 44 percent in 1980 to 55 percent in 1989, most likely because of a change in the American diet toward lower cholesterol proteins as alternatives to red

meats, as well as increased demand for varieties not harvested in the United States.

The import share of certain vegetables also rose over the decade. Asparagus imports rose from 10 percent of domestic consumption in 1980 to 22 percent in 1989. Imports of broccoli and cauliflower used for processing rose even more, from 9 percent of domestic consumption to 61 percent for broccoli and from 8 percent to 46 percent for cauliflower. Most of the imported processed broccoli and cauliflower comes from Mexico, where production costs are lower and where U.S. processing firms have expanded their production capacity.<sup>1</sup> Imports have also increased in noncompetitive tropical vegetables, such as taro, yams, chayote squash, and cassava.<sup>2</sup>

Imports of frozen citrus juice, however, while high in the mid-1980's, are beginning to show signs of dropping off as Florida citrus growers recover from several severe winter freezes which reduced production. Even so, imports still made up 31 percent of 1989 domestic consumption of frozen citrus juices, compared with 13 percent in 1980.

Also growing in the 1980's was the import share of domestic grape consumption. Most of the grapes produced in the United States go into processing, especially wine production. Therefore, to meet the demand for table grapes, the United States has been importing, since the late-1980's, over 30 percent of all grapes consumed.

### **Imports Supplement Domestic Production**

Although the United States is able to produce an abundance of fruits and vegetables, imports are often necessary to provide a year-round supply of fresh produce, such as eggplant, tomatoes, artichokes, and garlic. Imports of these commodities have been especially high during the winter and early spring months and have remained at constant levels throughout the 1980's.

Tree nut imports have leveled off at about 25 percent of domestic consumption. Most imports, such as filberts, Brazil nuts, pignolias, chestnuts, and cashews,

---

<sup>1</sup> U.S. Department of Agriculture, Economic Research Service, Vegetables and Specialties. Situation and Outlook, April 1991.

<sup>2</sup> *ibid.*

are not produced in the United States in quantities sufficient to meet domestic needs.

### **Few Imports of Dairy or Grains**

The United States imports only small quantities of commodities that it produces in abundance and that can be stored for long periods. To reduce regular surpluses of milk, cheese, and butter, the Government periodically administers inventory management, domestic feeding, and export programs.

The United States is one of the largest producers of wheat and feed grains and the largest exporter of these grains. It has, however, imported minor feed grains, such as rye and oats, during the 1980's primarily because of low production during mid-decade as planting of these crops lost out to higher valued crops like corn. When Federal programs encouraged planting of these minor feed grains and prices improved, imports declined. (Susan L. Pollack, Commodity Trade and Analysis Branch, 202-219-0822)

Note: Imports of many processed and packaged foods are not accounted for in these figures. The sweetener figures, for example, do not include sweeteners contained in such imports as confectionery products, sweetened bakery products, and other processed goods.

-- = Less than 0.05.

NA = not available.

1/ Calculated from supply and utilization balances constructed by the Commodity Economics Division of the Economic Research Service. Import share is the quantity imported divided by the quantity available for domestic food consumption (disappearance). Because a portion of the imports of some commodities are exported, the ratios presented here may slightly overstate the importance of imports in domestic consumption for some commodity groups.

2/ Excludes game fish consumption.

3/ Includes cultivated catfish.

4/ Excludes intermediate products such as mild-cured salmon and salted cod, haddock, hake, pollock, and cusk.

5/ Milk equivalent of all dairy products calculated on a milkfat basis.

6/ Includes cheddar, Colby, washed curd, stirred curd, and Monterey and Jack.

7/ Olive oil imports.

8/ Includes palm kernel oil, palm oil, and coconut oil.

9/ Includes almonds, filberts, pecans, walnuts, Brazil nuts, pignolias, and miscellaneous tree nuts, including chestnuts, cashews, and Macadamias.

10/ Includes apricots, avocados, cherries, cranberries, figs, grapes, nectarines, peaches, pears, pineapples, plums, prunes, strawberries, papayas, and miscellaneous fruits.

11/ The largest import commodity in this category.

## Export Share of Production Steady in 1990

During FY 1990, 17 percent of all U.S. farm production was exported, about the same as during 1988 and 1989. The share remained below FY 1981's record 22 percent, however. Most of the variation in this share came from changes in bulk product exports (grains, oilseeds, and cotton), although high-value exports climbed steadily during the 1980's. About 40 percent of all U.S. production of bulk products was exported in FY 1990, while the comparable figure for exported high-value products was about 9 percent, a new high.

Although 1990's export share fell short of a record, it was higher than during the mid-1980's. Poor U.S. competitiveness in bulk products had reduced the export share of agricultural production to as low as 14 percent in 1986, the lowest export share since FY 1973. High-value exports, however, fell only slightly as a share of production during the mid-1980's. The U.S. dollar's strength on foreign exchange markets and weak economic growth overseas hurt all U.S. exports during the first half of the 1980's.

### Calculating Exports' Share of Production

In volume terms, the export share of production is calculated with aggregate data on exports and production. Value data, however, present several difficulties. First, export value includes the costs of marketing and transportation besides the value of the product. The apparent export share of production is thereby inflated. Second, processing may add still further value to goods between the farm and the port, again inflating the export share. Third, the quality of U.S. exports of a given commodity may be consistently different from the average quality of total U.S. production of that commodity. The higher the quality of the exported portion of a crop, the higher the export price and the higher export share of production when calculated with aggregate value data for the crop.

Volume data, however, are inadequate for assessing the overall share of U.S. agricultural production exported. About \$4 billion of agricultural products exported are not measured in units of weight. Juice exports are measured in liters, live animals in numbers, and many products have no volume measurement at all. Although production of major field crops is measured in tons, production of many other products is not. Even if a single volume figure were available for annual U.S. agricultural production, its usefulness for determining the export share of production would be open to

question. Value provides a meaningful weighting scheme enabling comparison of disparate products. Weighing equally each dollar of production or exports rather than each ton is more economically meaningful.

Value and volume data for exports and production of the major U.S. field crops are widely available. Also, little difference exists between the quality exported and the average quality produced in these crops. Only transportation, marketing, and processing will inflate the port value of exported goods. During 1968-90, export value for these products (including transportation) averaged about 50 percent of the farm value of production. Export volume averaged 35 percent of the volume of production.

Having both the value- and volume-based shares permits calculation of the percent of "value-added" in total export value. This is value-added in the broadest sense: additional value to the crops after the farm due to marketing and transportation as well as processing. Adding value to a product raises its price, and the percent of value-added is equal to the percent increase in price, calculated as follows:

$$Q_x = \text{Quantity exported}$$

$$Q_f = \text{Quantity produced}$$

$$P_p = \text{Export price (at port)}$$

$$P_f = \text{Farm price}$$

$$V_x = Q_x P_p = \text{Export value}$$

$$V_f = Q_f P_f = \text{Farm value}$$

$$\frac{V_x}{V_f} = \text{Value-based export share of production}$$

$$\frac{Q_x}{Q_f} = \text{Volume-based export share of production}$$

$$\frac{V_x}{V_f} - \frac{Q_x}{Q_f} = \frac{Q_x(P_p - P_f)}{V_f}$$

$$\frac{Q_x(P_p - P_f)}{V_f} \frac{V_f}{V_x} = \frac{Q_x(P_p - P_f)}{V_x} = \frac{(P_p - P_f)}{P_p}$$

The 50- and 35-percent shares noted above imply that about 30 percent of the export value of these bulk products is value-added after the farm. Other evidence supports this figure. Comparisons between average farm prices and average export prices imply a 20-percent price increase between farm and port in the absence of processing. When processed products are

included in the export data, we expect a figure higher than 20 percent.

### Bulk Versus High-Value Products

Since processed products made from major field crops are included together for a bulk products total, the definitions of bulk and high-value products used here are different from the definitions most commonly used. Field crops processed into value-added products, such as flour, oilseed meal, cooking oil, and bakery products, are typically called high-value products. Because these products represent field crops in an advanced form, however, they have been summed with raw field crop exports.

High-value products include fruits, nuts, vegetables, livestock products, and numerous other goods shipped in small volumes. The wide variety of products makes it difficult to calculate a valid volume-based export share of production.

Even if comparable data were available for high-value products, the importance of quality differentiation in high-value product exports would render the above formulas inaccurate. For example, the quality of fruit intended for fresh sale is greater than that of fruit intended for processing, and its price is therefore higher. The quality of at least some exported fruits exceeds the average quality of U.S. fruit produced for human consumption. In 1989, the export price for fresh oranges was 132 percent higher than the average farm price for U.S. fresh-quality oranges. As a result, the export share of production was 39 percent for value and 17 percent for volume. With the formulas cited earlier, these figures imply that 59 percent of all export value stemmed from value-added after the farm. However, fresh oranges are not processed, and transportation could account for only a small portion of this 59 percent. Therefore, using aggregate U.S. production data produces misleading results.

Another problem affecting data for high-value products is underreporting exports to Canada during the 1980's. While estimates of this undercounting are available, extensive manipulations of adjusted data are best avoided under the circumstances. The 30-percent value-added derived from total raw and processed bulk crop exports may be invalid for high-value product exports, but no compelling reasons favor revision. An across-the-board estimate of 30-percent value-added between the farm and the port helps estimate total export share of production. An estimated correction for undercounted exports to Canada was added.

$V_c$  = Additional exports to Canada

$$V_c + V_x = V'_x$$

$$(1-0.30)V'_x = V_{xf} = \text{Farm value of U.S. agricultural exports}$$

$$\frac{V_{xf}}{V_f} = \text{U.S. export share of production}$$

### Record Share of High-Value Product Output Exported

Although bulk agricultural exports lagged earlier records in recent years, U.S. exports of high-value agricultural products in 1990 surpassed previous records. Nonagricultural exports in 1990 surpassed their 1981 peak by more than \$125 billion, making them a significant source of growth for the U.S. economy. U.S. nonagricultural exports averaged about 7 percent of gross national product (GNP) in recent years, a share which has been climbing steadily since the mid-1980's (using an unadjusted export value). As the volume of exports continues to grow faster than the production of goods by the U.S. economy, the export share of nonagricultural production approaches the 8-percent record share of GNP set at the beginning of the 1980's, leading to strong U.S. competitiveness.

High-value agricultural product exports have benefited from this competitiveness. Like nonagricultural exports, high-value agricultural exports go primarily to wealthy developed countries. Strong economic growth in these countries has meant growing incomes, helping to strengthen their currencies against the U.S. dollar. In contrast, U.S. bulk agricultural products are largely exported to less wealthy countries, such as the Soviet Union and developing countries. Both developing countries and former members of the Eastern Bloc have suffered from weak economic growth and difficulty securing sufficient foreign exchange in recent years, impairing their ability to import agricultural products.

The European Community emerged as an increasingly formidable exporter of bulk products during the 1980's. High domestic prices behind tariff walls in the EC boosted production sufficiently to displace U.S. sales both in the EC and in other markets. While EC policy also favors production of high-value goods within the EC and subsidizes their export, the rapid growth for bulk products was not duplicated in high-value products. (Stephen MacDonald, Commodity and Trade Analysis Branch, 202-219-0822)

## **California Still Top Agricultural Exporting State in FY 1990**

California remained the top exporting State for agricultural products for the sixth year in a row. Also ranked in the top 10 were: Iowa, Illinois, Nebraska, Texas, Kansas, Minnesota, Indiana, Missouri, and Ohio (table 9). The same States formed the 1989 top 10, although the order changed slightly in 1990. These States accounted for 59 percent of all U.S. agricultural exports.

State agricultural export estimates are based on the State's production of a commodity and the assumption that it receives export revenues in the same proportion as its production. Additional information, such as customs data by port of export or wheat shipments by type, are incorporated where appropriate.

California accounted for 11 percent of all agricultural exports, ranking first in fruits and vegetables, exporting about half of each, and first in seeds, exporting 24 percent. California finished second in exporting cotton, cottonseed, and dairy products.

Iowa and Illinois ranked second and third among all States. Each contributed 8 percent and were the leaders in exports of feed grains and soybeans, the

two highest valued export commodities in FY 1990. Nebraska dropped from second place in FY 1989 to fourth in FY 1990, mainly because of its lower share of feed grain exports. Kansas also dropped in the rankings, from third to sixth, largely due to the overall decline in the value of wheat, of which Kansas is the primary exporter.

### **Value of Export Commodities Shift**

While the total value of agricultural exports increased just 1 percent from FY 1989, the differences in the value of individual commodities varied widely. Wheat export value, for example, dropped 30 percent from FY 1989. The decline mirrored decreased demand for U.S. wheat and a drop in the price as world production reached a record high. Dairy products, animal fats, rice, and soybeans also declined in value.

Export value increased for vegetables (34 percent), cotton (32 percent), and fruits (22 percent). Fruit and vegetable gains partially reflected revised data collection procedures. Cotton exports rose because tighter world supplies increased the demand for U.S. cotton. These increases boosted exports from California and Texas, which ranked among the top 10. Increases also occurred in poultry, seeds, feed grains, hides, tobacco, and nuts. (Susan Pollack, Commodity and Trade Analysis Branch, 202-219-0822)

1/ Mainly miscellaneous animal products, coffee, tea, spices, and sugar.

# INDEX OF APPENDIX TABLES

## Exports

Table		Page
A-1	U.S. agricultural exports: Quantity and value by commodity .....	A-2
A-2	U.S. agricultural exports: Quantity, value, and unit value by commodity and country, October-April 1989/90 and 1990/91, and April 1991 .....	A-4
A-3	U.S. wheat exports: Quantity (1,000 MT) by destination, October-April 1989/90 and 1990/91 .....	A-61
A-4	U.S. coarse grain exports: Quantity (1,000 MT) by destination, October-April 1989/90 and 1990/91 .....	A-62
A-5	U.S. soybean exports: Quantity (1,000 MT) by destination, October-April 1989/90 and 1990/91 .....	A-63
A-6	U.S. agricultural exports: Value (1,000 dol.) by destination, October-April 1989/90 and 1990/91 .....	A-64

## Imports

B-1	U.S. agricultural imports: Value (1,000 dol.) by country of origin, October-April 1989/90 and 1990/91, and April 1990 and 1991 .....	B-1
B-2	U.S. agricultural imports: Quantity and value by commodity .....	B-2
B-3	U.S. agricultural imports: Quantity, value, and unit value by commodity and country, October-April 1989/90 and 1990/91, and April 1991 .....	B-4

## Prices

C-1	Foreign currency units per U.S. dollar .....	C-1
C-2	Domestic and foreign wheat prices .....	C-2
C-3	Corn, sorghum, rice, and cotton prices .....	C-2
C-4	U.S. and northern European soybean and product prices .....	C-3
C-5	U.S. import prices .....	C-3

Appendix table B-2--U.S. agricultural imports: Quantity and value by commodity--continued

Commodity	October-April				April			
	Thousand units		Thousand dollars		Thousand units		Thousand dollars	
	1988/90	1990/91	1988/90	1990/91	1990	1991	1990	1991
Pistachio nuts(MT):	2	1	6,168	1,687	0	0	270	65
Other nuts(MT):	16	29	26,841	65,676	1	3	2,531	6,891
Vegetables & preps(NA):	--	--	1,615,020	1,402,767	--	--	176,223	231,927
Vegetables - fr or froz(MT):	1,438	1,391	994,038	781,486	166	234	83,427	142,511
Tomatoes(MT):	315	284	360,773	185,094	18	59	10,175	50,189
Asparagus(MT):	15	21	23,612	29,255	0	1	365	1,161
Beans(MT):	18	13	20,532	12,662	1	1	1,083	1,622
Carrots(MT):	46	41	9,393	12,326	4	4	986	1,112
Cucumbers(MT):	174	156	69,153	68,243	12	12	5,054	7,161
Eggplant(MT):	13	18	16,304	11,751	2	2	845	1,916
Gerlic(MT):	10	8	11,178	9,862	2	2	2,277	2,625
Lettuce(MT):	11	9	4,223	4,212	0	0	36	137
Onions(MT):	140	166	51,424	75,963	37	50	9,660	16,709
Peas, incl chickpeas(MT):	29	24	37,292	27,004	3	2	3,738	3,101
Peppers(MT):	108	98	129,392	88,046	10	9	12,477	17,761
Potatoes(MT):	185	228	53,744	53,143	28	43	9,747	9,793
Squash(MT):	73	68	41,090	43,681	8	8	4,259	5,731
Other veds - fr or froz(MT):	302	258	165,927	160,244	39	39	22,715	23,492
Vegetables-prep/pres(NA):	--	--	620,983	621,281	--	--	92,795	89,415
Olives - prep or pres(MT):	42	38	86,885	78,506	6	4	12,687	9,309
Mushrooms, cenned(MT):	26	28	66,025	68,277	4	5	12,140	11,630
Hops, incl extract(MT):	7	8	33,683	33,935	0	1	737	3,227
Artichokes - prep(MT):	8	9	14,649	16,589	1	0	1,061	767
Asparagus - prep(MT):	1	0	1,578	665	0	0	218	29
Tomatoes, incl paste & sauce(MT):	81	59	76,989	48,697	18	15	17,636	11,616
Waterchestnuts(MT):	20	19	15,518	15,158	3	3	2,272	2,588
Beans & peas, dried(MT):	31	27	16,881	16,473	4	3	2,137	1,807
Other vegetables-prep/pres(NA):	--	--	308,776	342,981	--	--	43,907	48,442
Sugar & related prods(NA):	--	--	610,481	621,451	--	--	108,940	89,716
Sugar - cane & beet(MT):	953	963	394,659	389,151	168	133	72,678	50,633
Molasses(HL):	4,866	5,952	44,644	54,105	991	1,203	11,159	11,771
Confectionary prods(MT):	57	55	102,197	109,482	8	8	14,810	16,340
Other sugar & related prods(MT):	154	159	68,981	68,713	21	23	10,293	10,971
Spices(MT):	11	8	15,348	15,260	2	2	3,266	3,518
Tobacco - unmg(MT):	100	114	302,385	365,985	15	20	44,251	60,933
Tobacco - filler(MT):	96	103	293,129	355,070	13	18	42,372	58,903
Tobacco - scrap(MT):	4	11	2,133	5,106	1	2	493	963
Other tobacco(MT):	1	1	7,123	5,809	0	0	1,385	1,067
Beverages, ex fruit juices(HL):	7,295	7,111	1,048,648	1,084,309	1,082	872	140,991	139,024
Wine(HL):	1,682	1,442	564,822	577,386	196	176	61,685	69,849
Melt beverages(HL):	5,197	5,206	453,447	471,438	840	722	75,447	63,342
Other beverages(HL):	416	463	30,379	35,485	56	74	3,859	5,833
